

Privacy Policy

Effective date: 31 August 2026

This privacy policy applies to the Process Modelling app (“the App”), published by **ADG ENERGY SERVICES LTD**, a company registered in Scotland under company number **SC269308**, registered office at **55 Haulkerton Crescent, Laurencekirk, Aberdeenshire, AB30 1FB SCOTLAND** (“we”, “us”, “our”).

Summary

We do not collect, store, transmit, or share any personal data through the App. The App works entirely with files on your own device — there is no account to create, no data sent to us or to any third party, and no tracking or analytics of any kind.

What the App does with your data

The App is a process-modelling tool. Everything it does happens locally on your device:

- **Model files.** You open, edit, and save process model files (.mod) using the standard file pickers provided by iOS/iPadOS/macOS. These files stay wherever you choose to save them — on your device, in iCloud Drive, or elsewhere you select — and we never see or receive them.
- **Data files.** You may optionally choose your own critical-properties or binary-interaction-parameter CSV files in place of the bundled defaults. These are read locally in the same way.
- **Exports.** CSV, PDF, and other exports the App generates are saved only to a location you choose, using the system's standard save dialog.
- **Folder access permission (macOS only).** To avoid repeatedly asking your permission every time it writes a report file next to a deck you're working on, the App stores a small technical record (a “security-scoped bookmark”) of folders you've previously granted it access to. This is stored only in the App's local settings on your own device, contains no personal information, and is never transmitted anywhere.

We have no server, no database, and no backend of any kind that the App communicates with. The App does not require or use an internet connection to function.

Data we do not collect

We do not collect:

- Your name, email address, or any other identifying information
- Analytics or usage statistics
- Crash reports or diagnostic data (beyond whatever you may separately choose to share directly with Apple, which is governed by Apple's own privacy policy, not ours)
- Advertising or tracking identifiers
- Location data
- Any information from your contacts, photos, camera, or microphone

Third parties

The App does not integrate any third-party analytics, advertising, or tracking software development kits (SDKs). The App's only dependency is our own internal thermodynamics library, which runs entirely on your device.

The App is distributed via the Apple App Store. Apple's collection and processing of information related to your purchase, download, and use of the App (e.g. purchase history, device information for compatibility, or any diagnostics you opt in to share with Apple) is governed by [Apple's own privacy policy](#), not this one.

Children's privacy

The App does not knowingly collect any information from anyone, including children, because it does not collect information from anyone at all.

Your rights

Because we do not collect or process any personal data, there is no personal data of yours for us to access, correct, delete, or export. If you have any questions about this, or believe this policy is inaccurate, please contact us using the details below.

If you are in the UK or EU, you have rights under the UK GDPR / EU GDPR regarding personal data, though as noted above we do not hold any personal data relating to your use of the App.

Changes to this policy

If we ever change what the App does in a way that affects this policy — for example, if a future version adds optional cloud sync, analytics, or any other data collection — we will update this page and update the “Effective date” above. Any such change would also be reflected in the App Store's App Privacy disclosure for the App.
